

My Remote Data Science Internship Experience at Oeson Learning (Jul 2024 – Sep 2024)

This summer, I had the opportunity to participate in a remote Data Science internship at Oeson Learning, and it was an enriching experience. The internship not only helped me grow my technical skills but also gave me a real sense of what it's like to work in the fast-paced world of data science.

One of the key areas I focused on during the internship was learning core data science concepts and tools. I gained hands-on experience with Machine Learning, Neural Networks, statistics, exploratory data analysis (EDA), and data pre-processing. I also worked extensively on data cleaning, which is an essential part of any data science project. Additionally, I got to use Tableau, a powerful tool for data visualization, which helped me understand how to present data insights in a clear and impactful way.

I worked on several real-world projects that allowed me to apply these skills. One project involved analyzing large datasets to uncover patterns and trends. This project really helped me strengthen my understanding of how to clean and process data effectively before diving into the analysis. Another project focused on building predictive models using Machine Learning techniques, which gave me a better grasp of how these models work in practice.

The guidance and feedback from my mentor Manisha were invaluable throughout this experience. Regular check-ins and constructive critiques helped me overcome challenges and improve my skills.

Overall, the Data Science internship at Oeson Learning was a fantastic experience. I walked away with practical skills in Machine Learning, data analysis, and visualization, and I feel more prepared to take on future data science roles.

I highly recommend this internship to anyone looking to break into the field of data science and gain meaningful, hands-on experience.
